Lab Sheet 3

A) Number Function

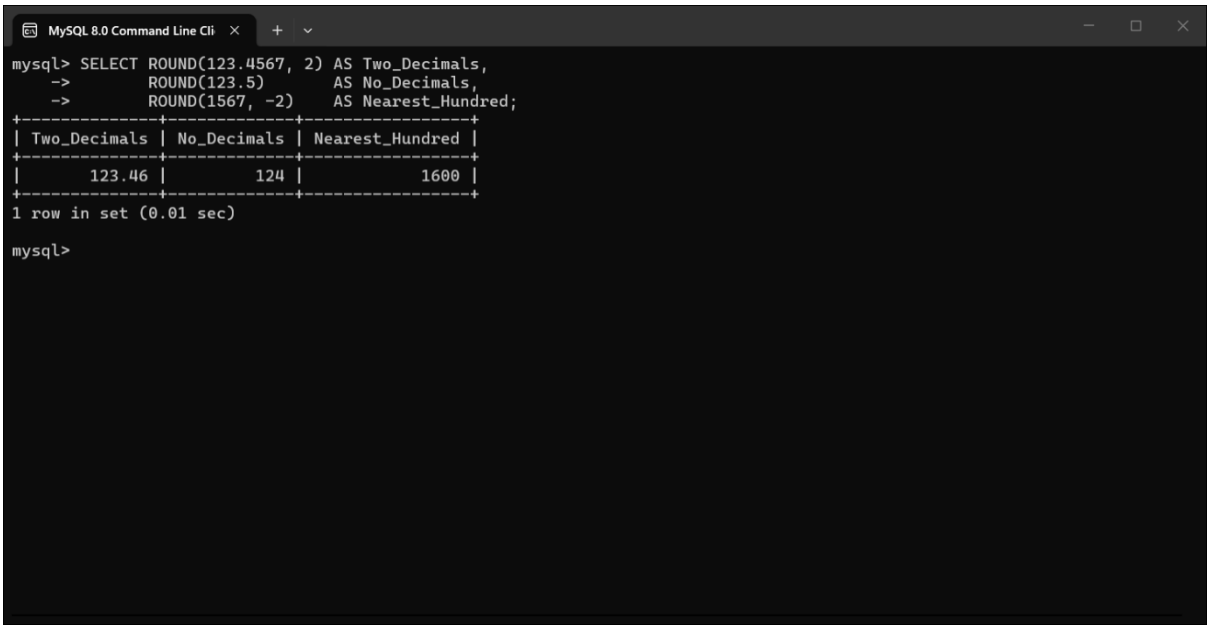

1- Demonstrate ABS() with suitable examples.

ABS() : gives the value without minus sign

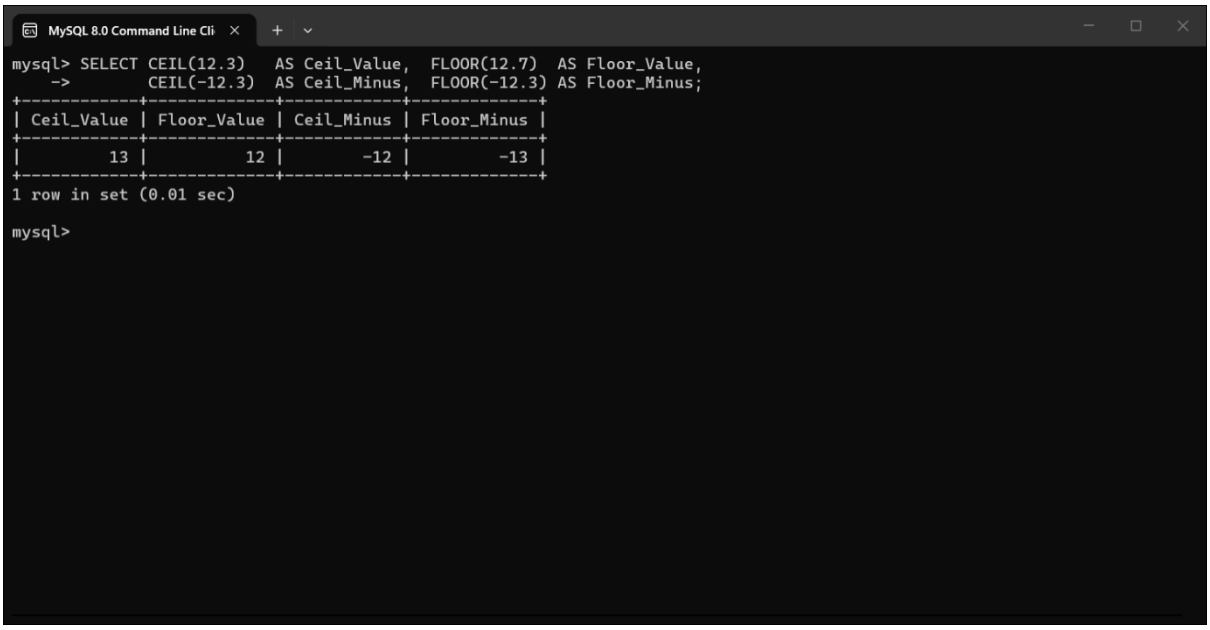

2- Demonstrate ROUND() with suitable examples.

ROUND() : rounds a number to given decimal places

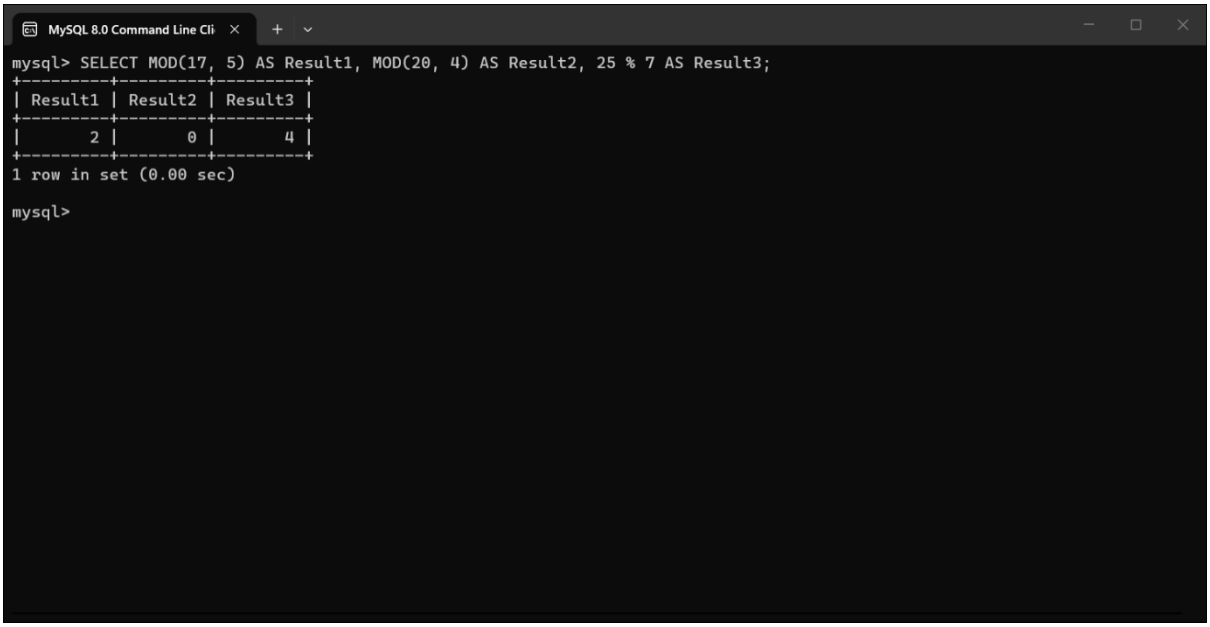

3- Demonstrate CEIL() and FLOOR().

CEIL() and FLOOR() : next whole number up / down

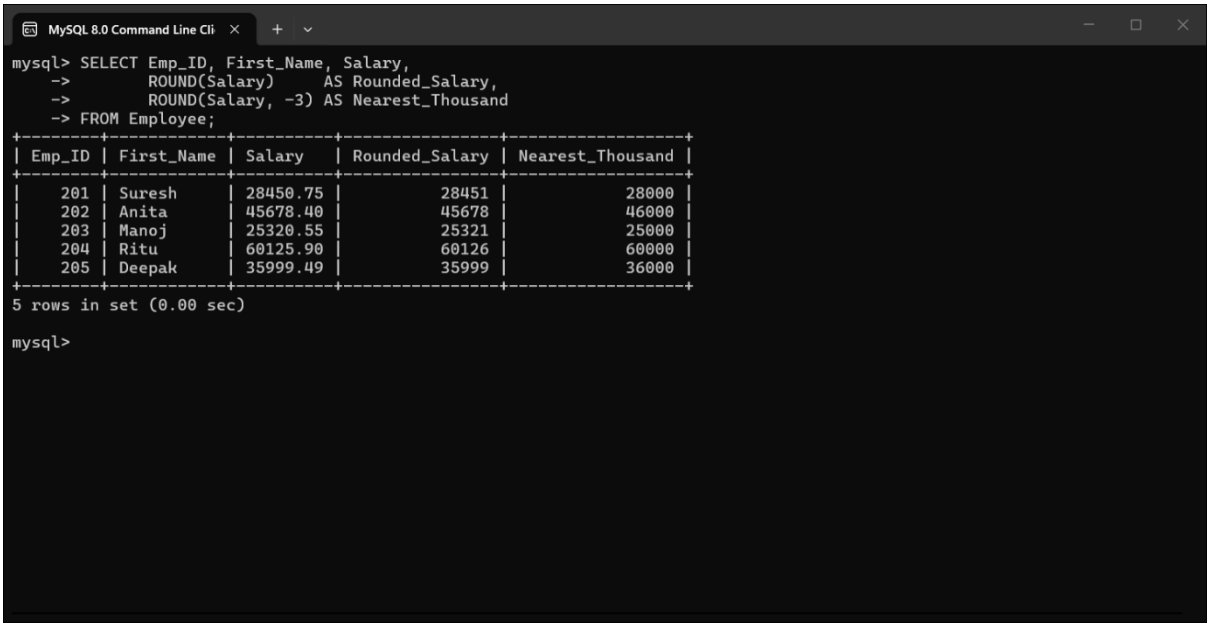

4- Demonstrate MOD() with suitable examples.

MOD() : remainder after division

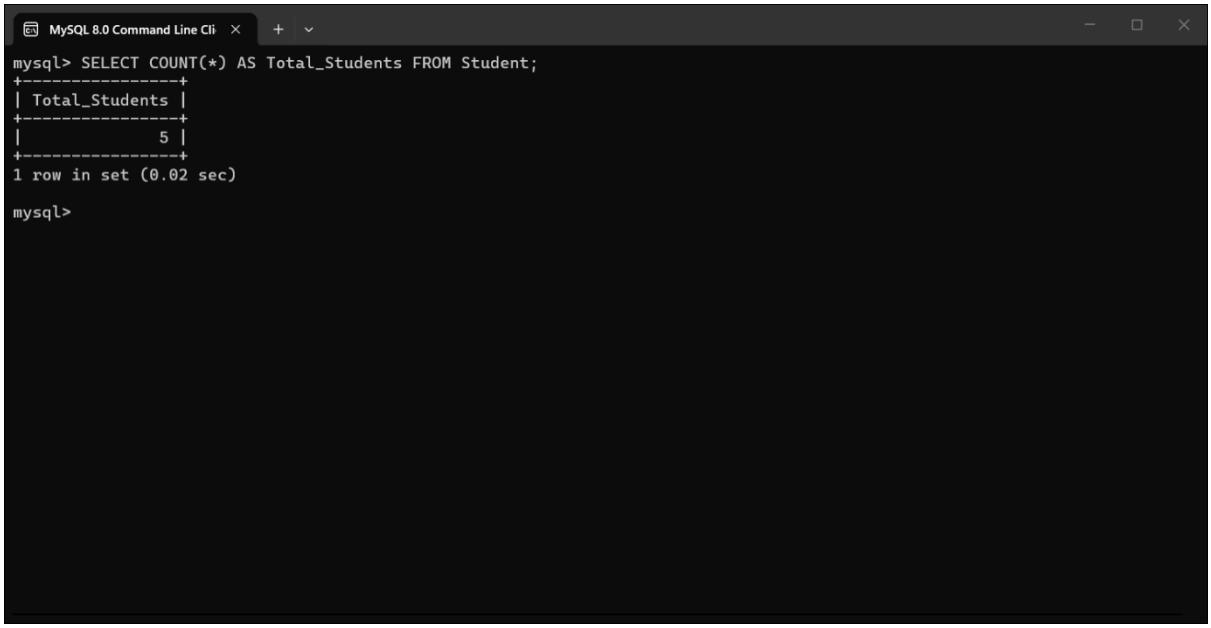

5- Calculate the rounded salary of employees.

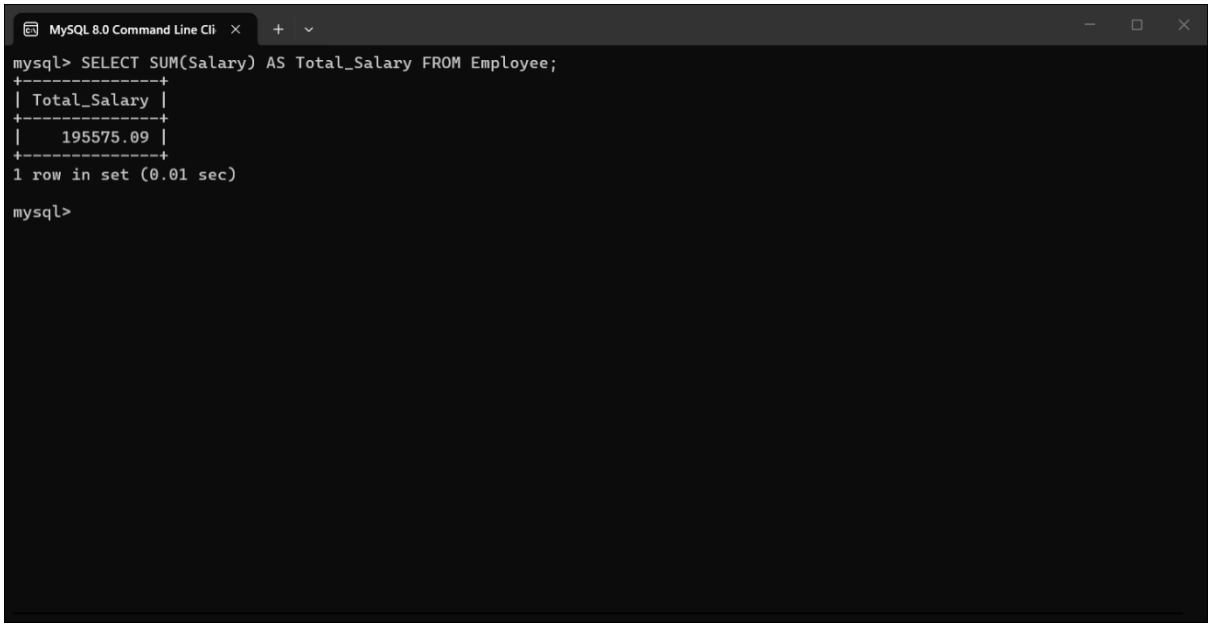

B) Aggregate Functions

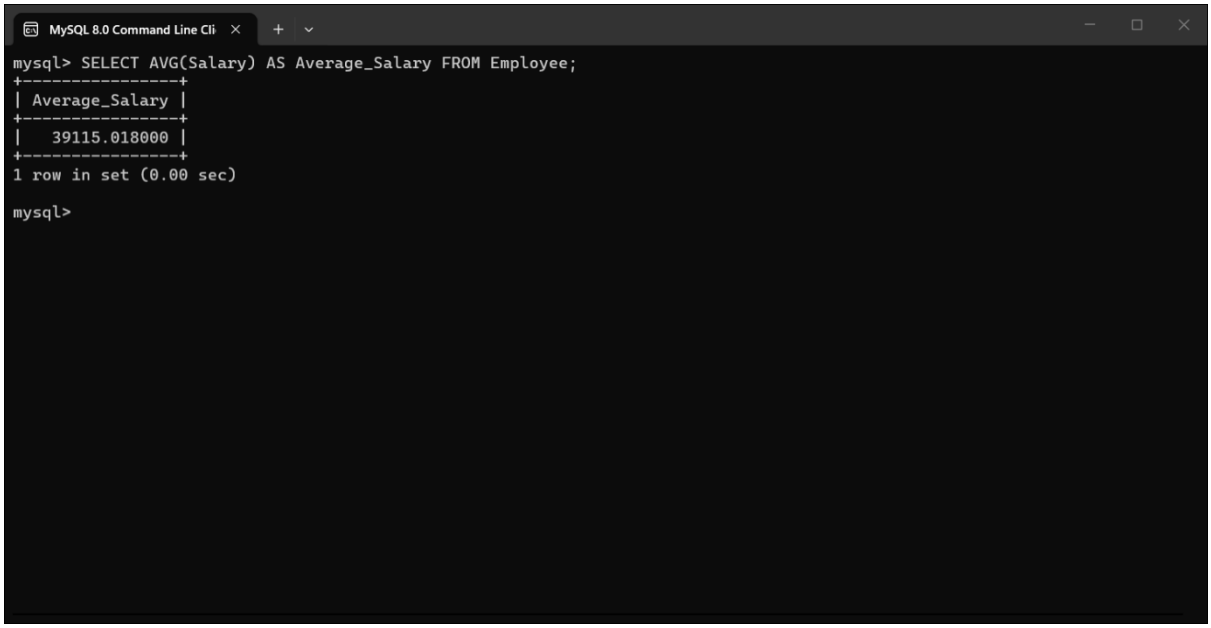

6. Find the total number of students using COUNT().

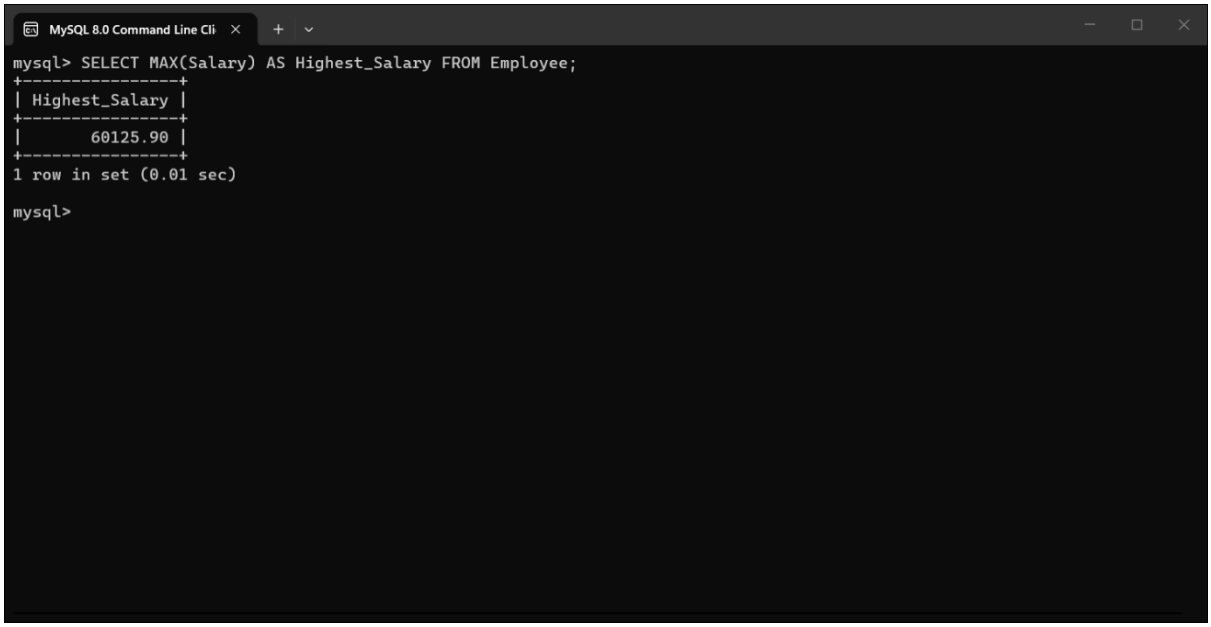

7. Find the total salary of all employees using SUM().

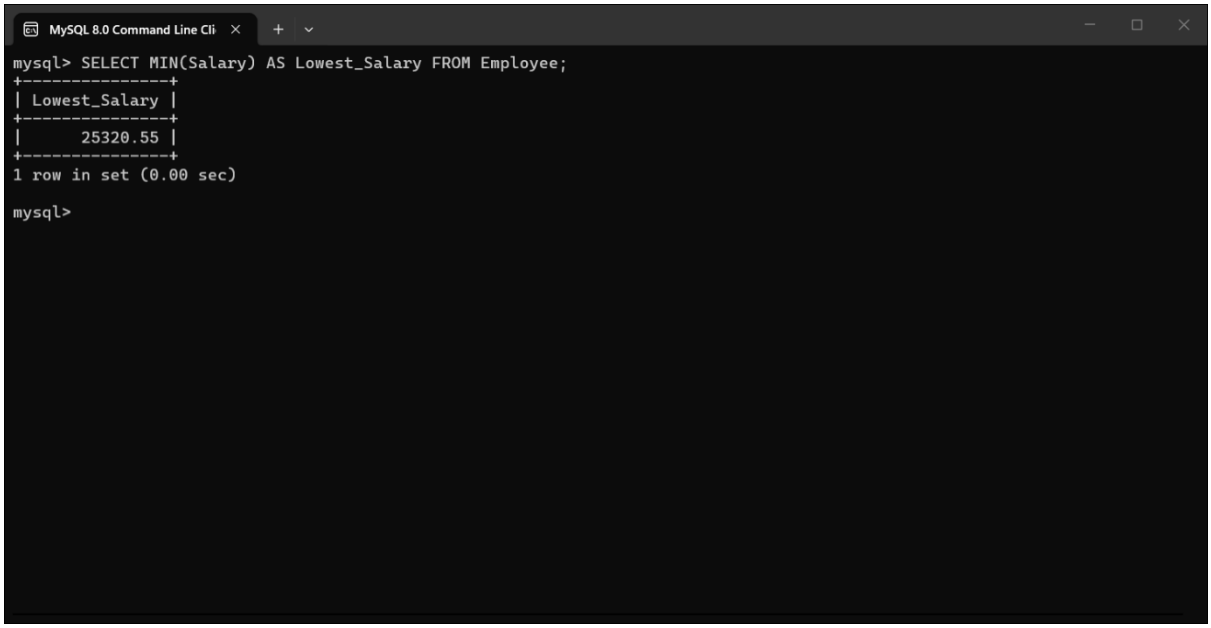

8. Find the average salary using AVG().

9. Find the highest salary using MAX().

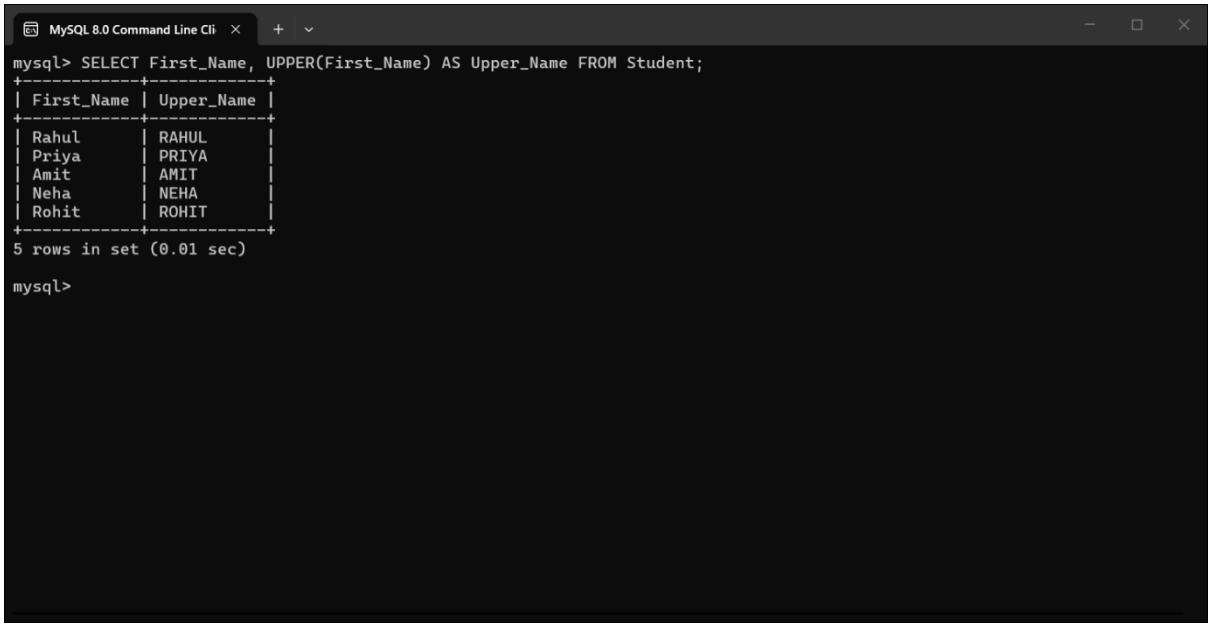

10. Find the lowest salary using MIN().

C. Character Functions

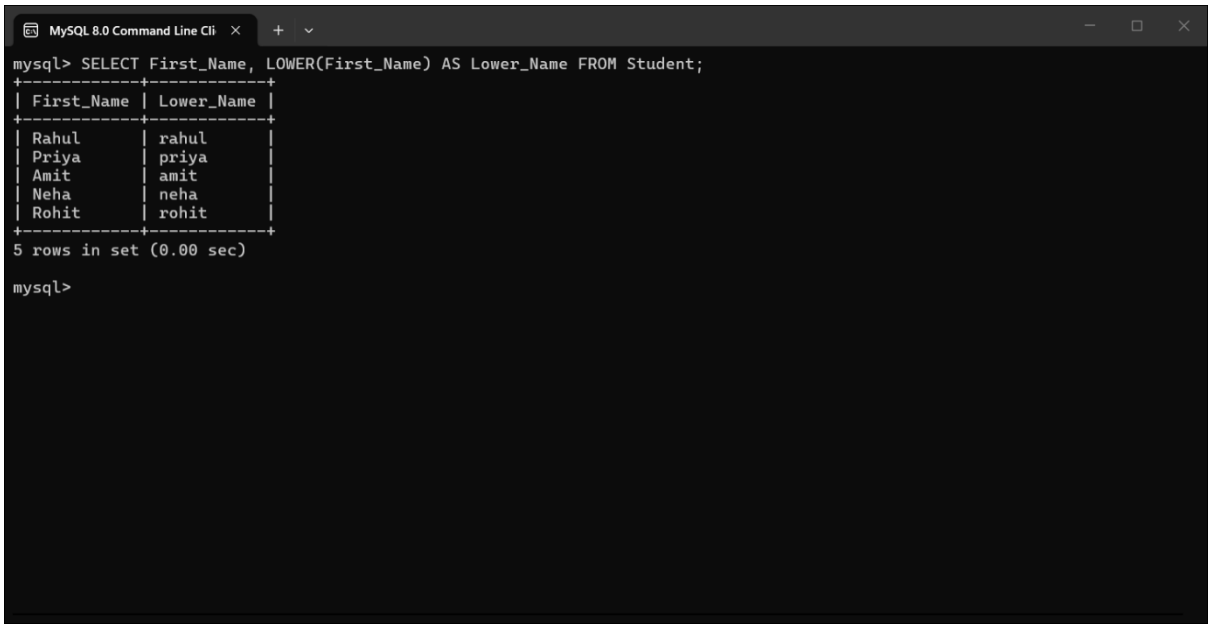

11. Demonstrate UPPER() on student names.

UPPER() : changes text to capital letters

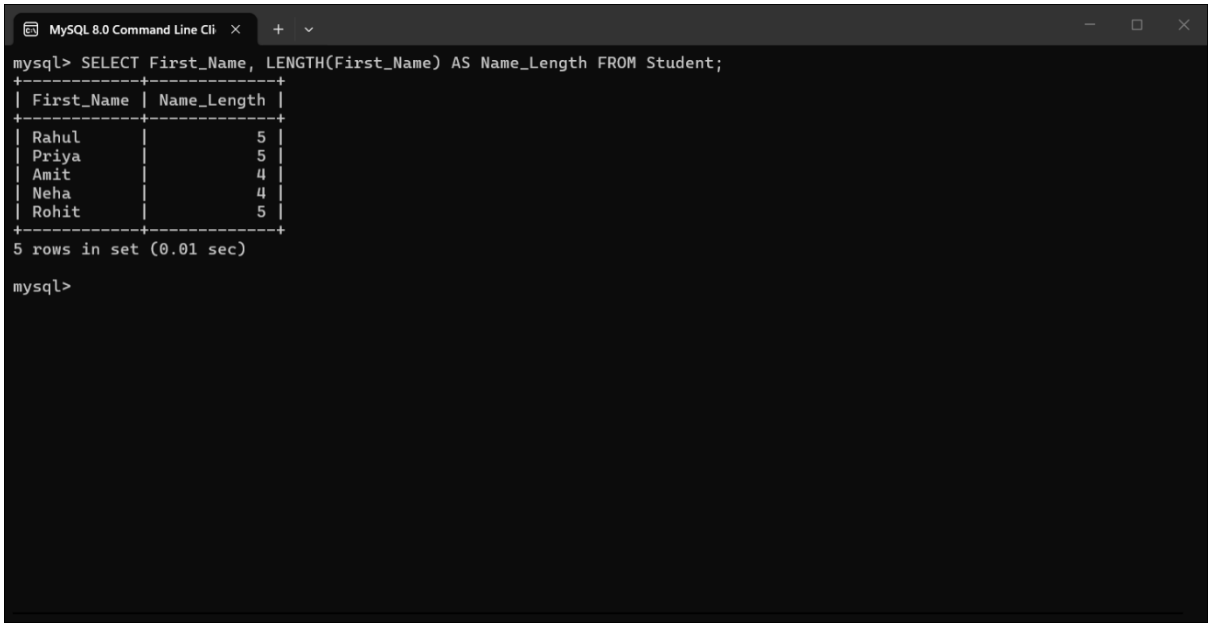

12. Demonstrate LOWER() on student names.

LOWER() : changes text to small letters

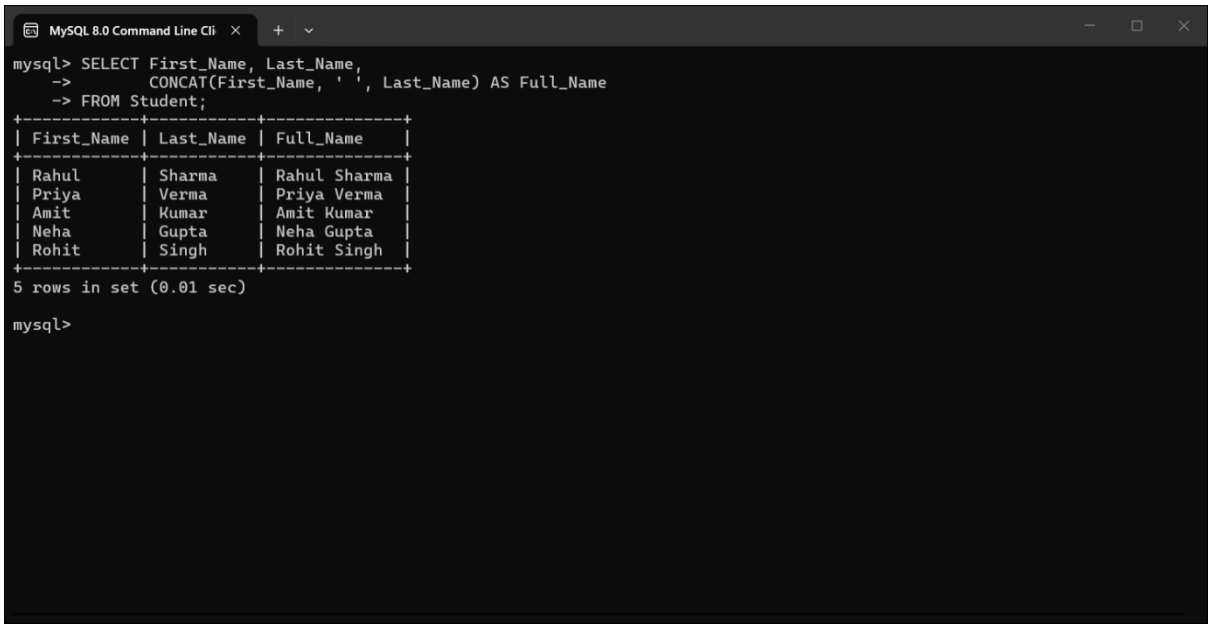

13. Demonstrate LENGTH() on student names.

LENGTH() : counts the characters in a name

14. Demonstrate CONCAT() using first and last names.

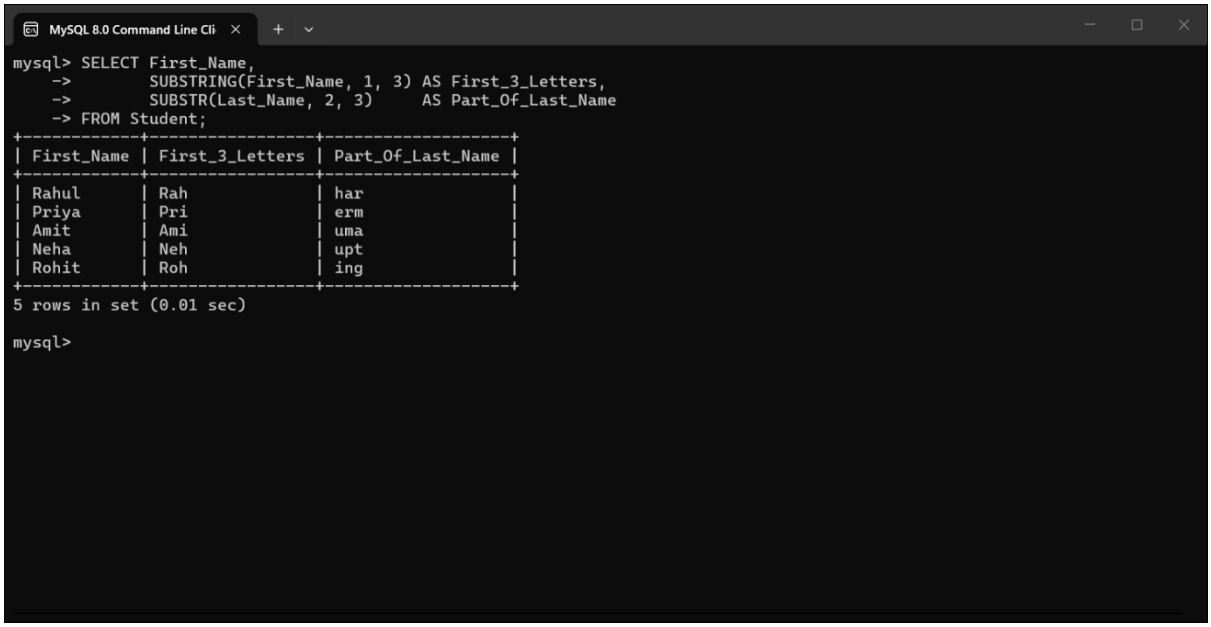

CONCAT() : joins first name and last name

15. Demonstrate SUBSTRING()/SUBSTR() with suitable examples.

SUBSTRING() / SUBSTR() : takes a part of the text

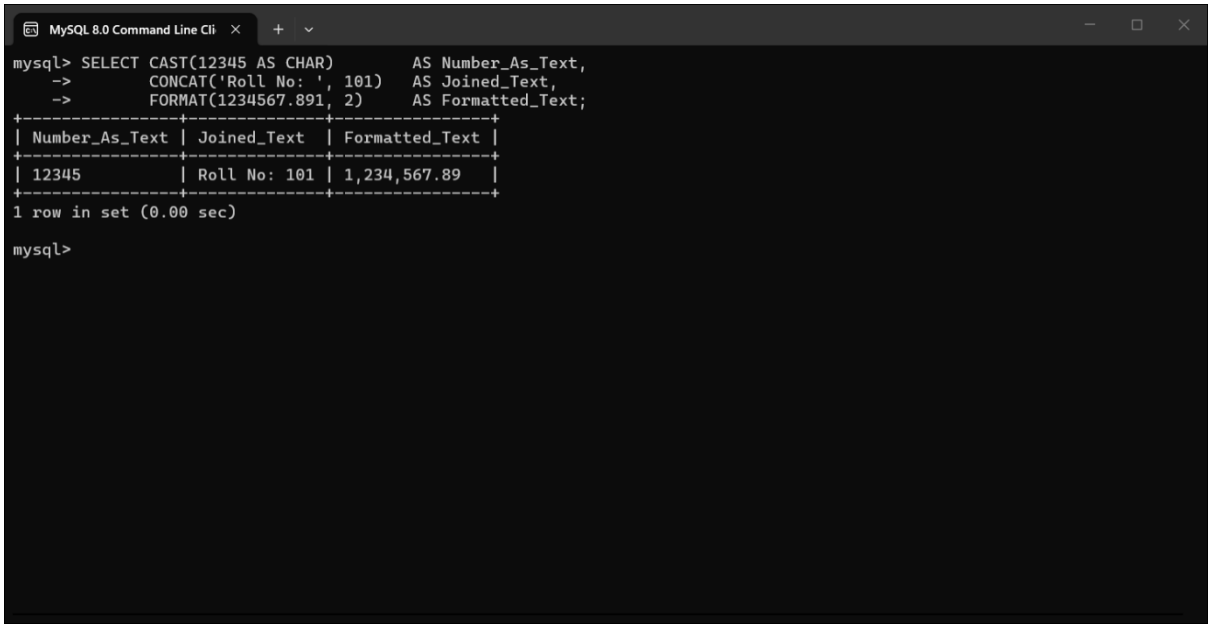

SUBSTRING(text, start position, number of characters)

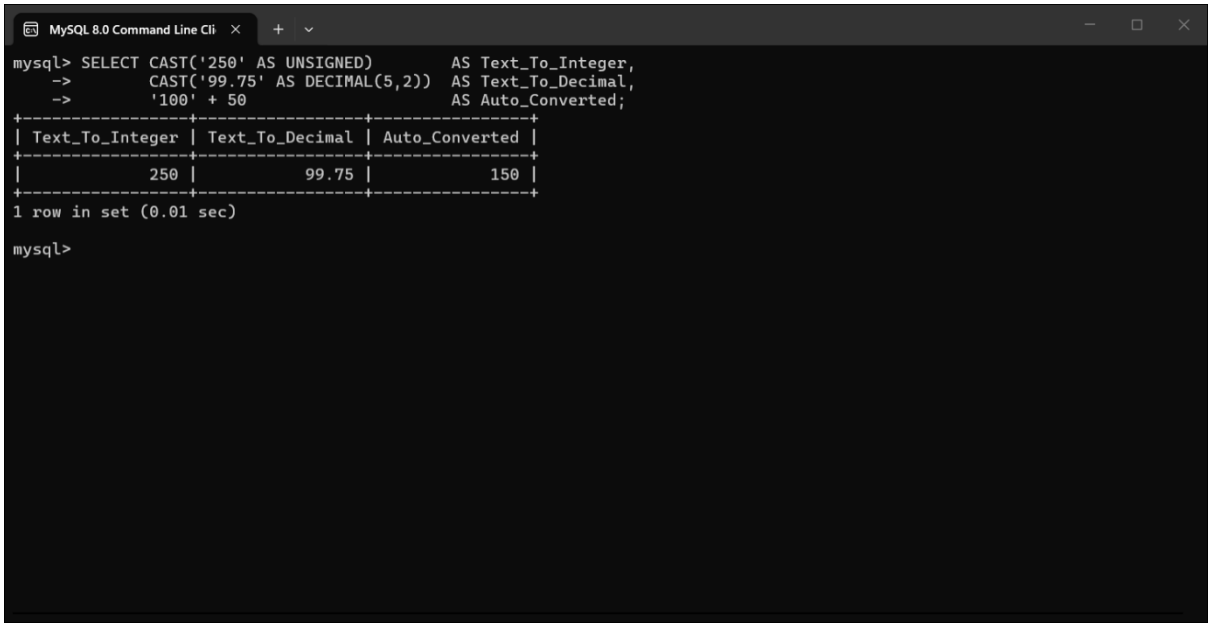

D. Conversion Functions

16. Convert a number into a character/string value.

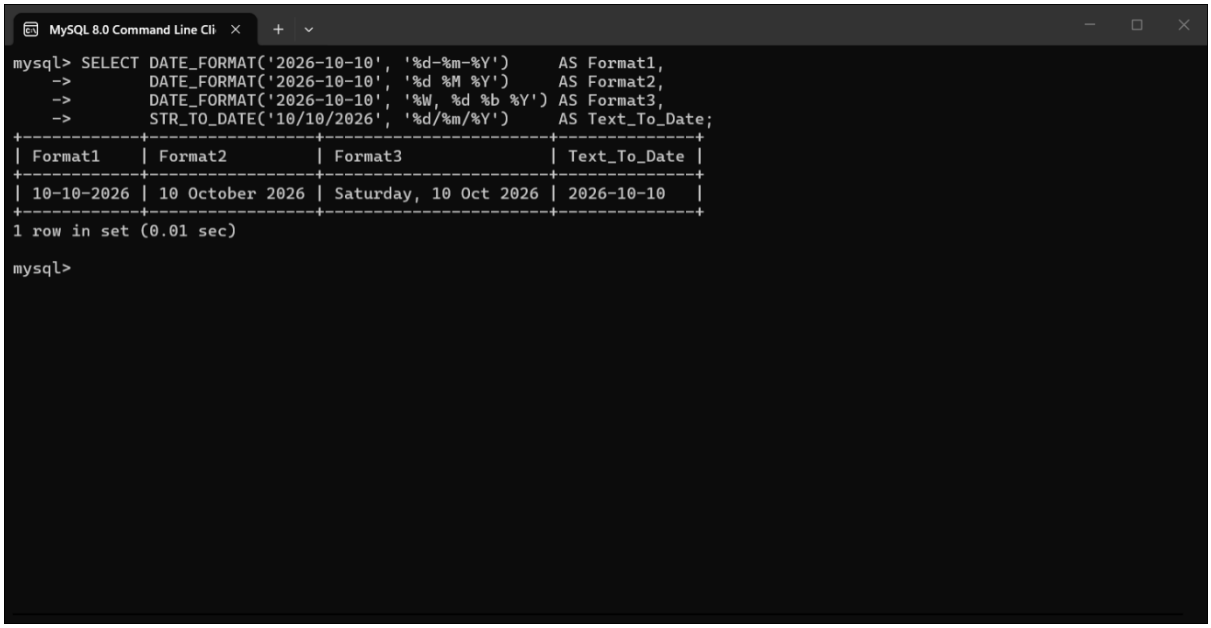

Number to string

17. Convert a string into a numeric value.

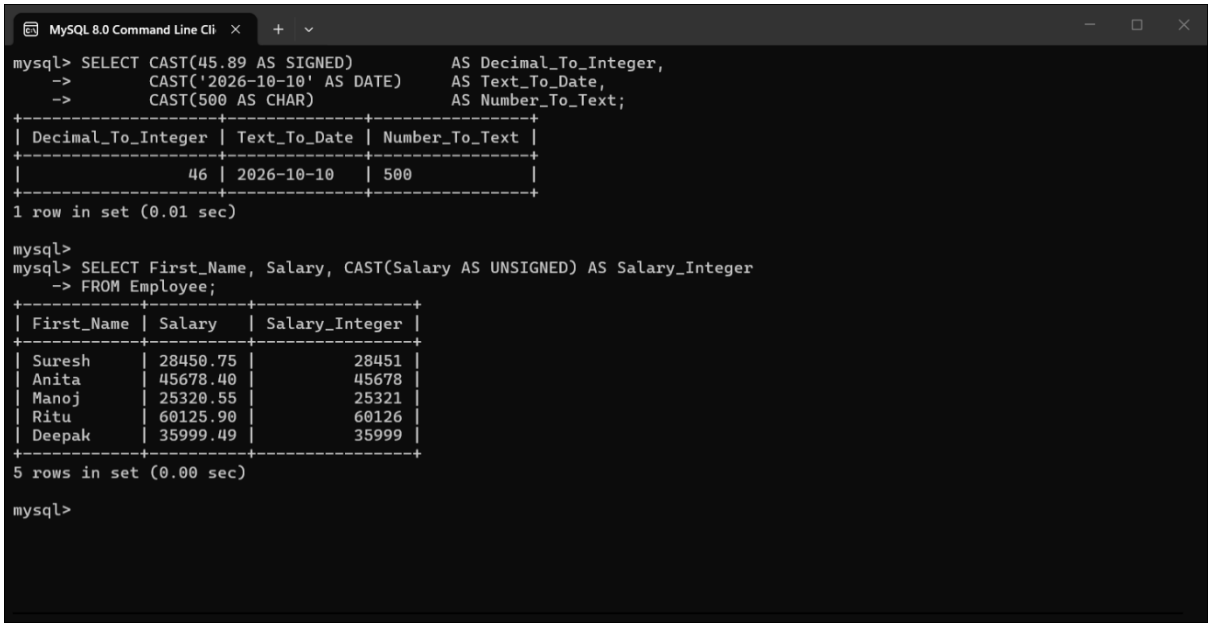

18. Convert a date value into a different format.

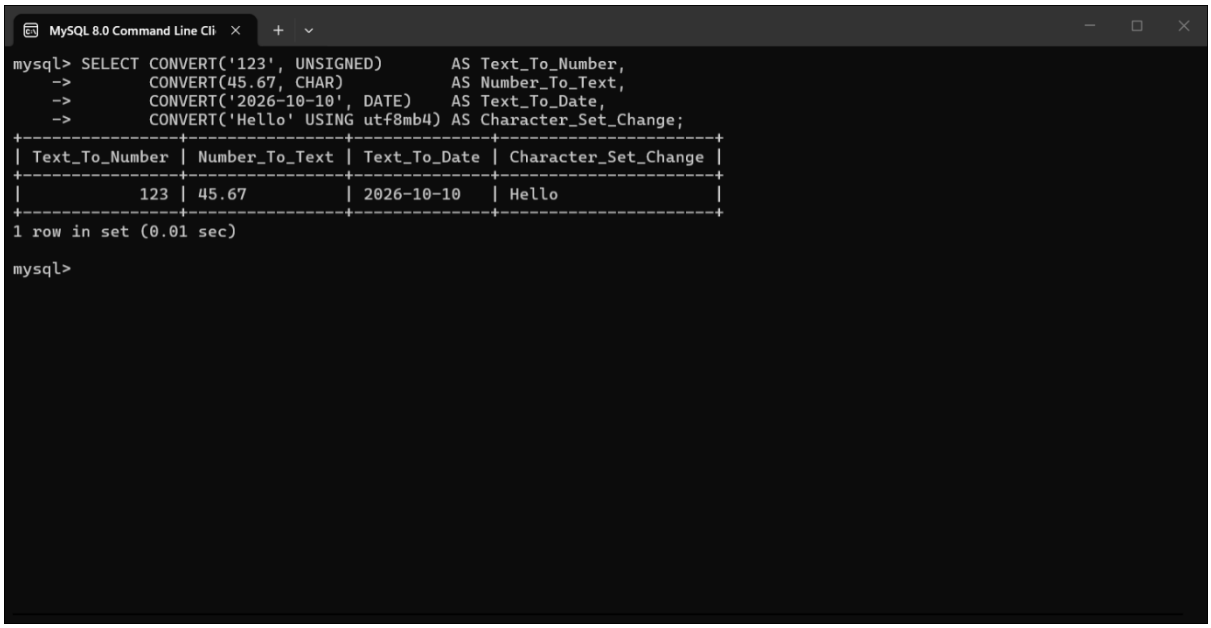

19. Demonstrate CAST() with suitable examples.

CAST() : changes one data type into another

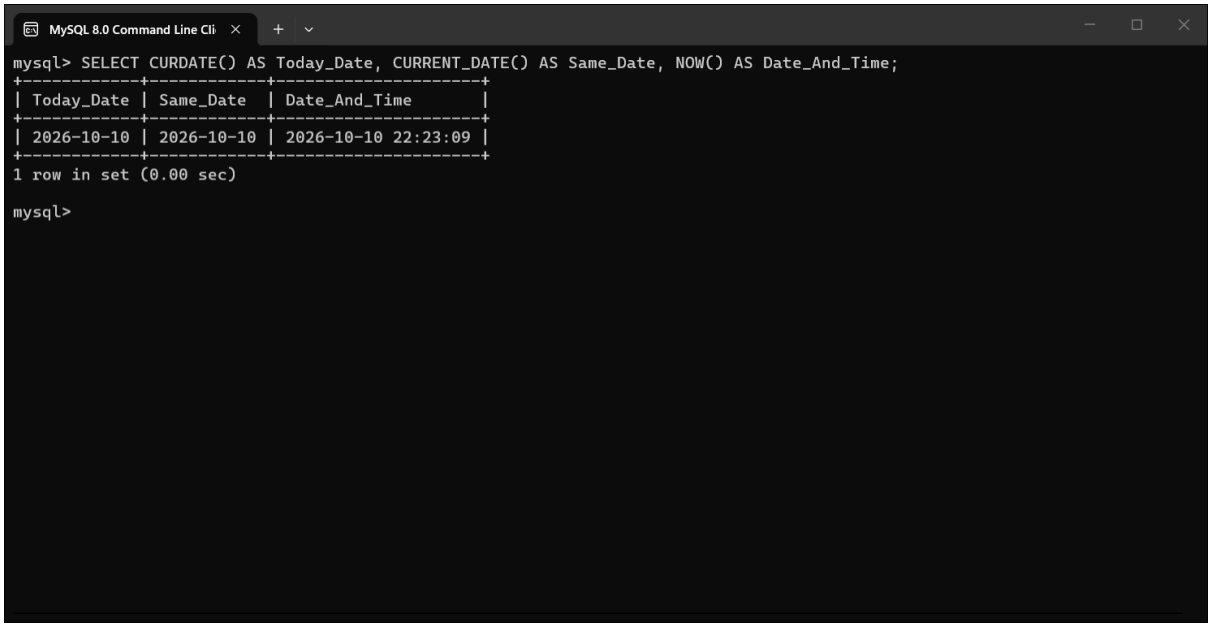

20. Demonstrate CONVERT() where supported by the DBMS.

CONVERT() : works like CAST in MySQL

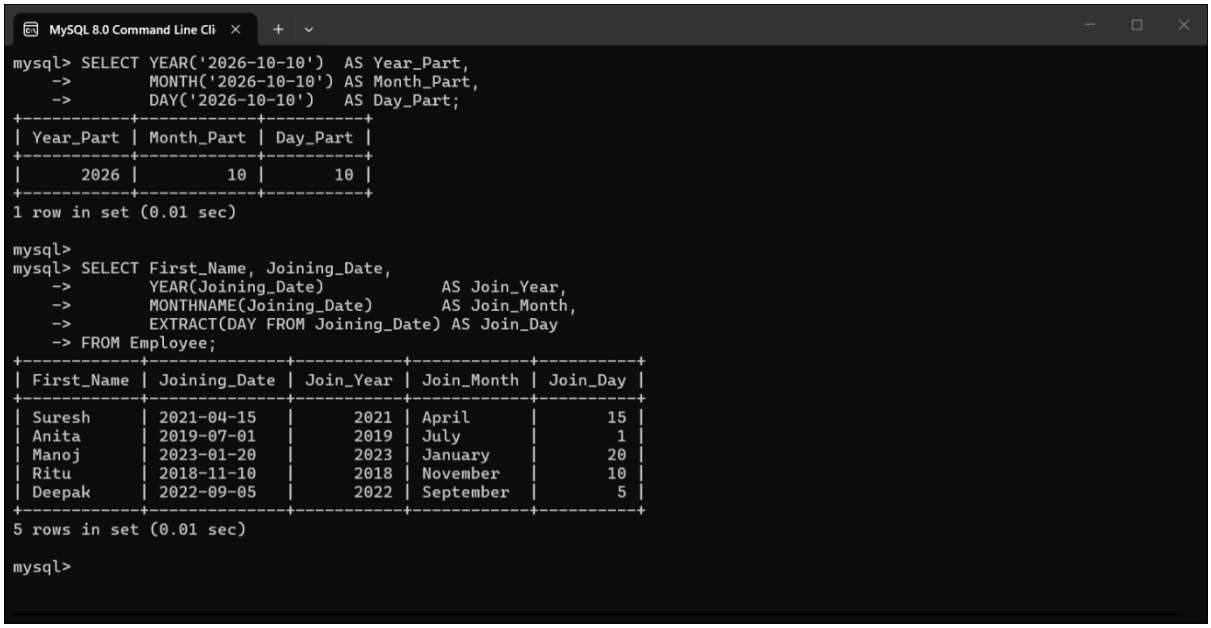

E. Date Functions

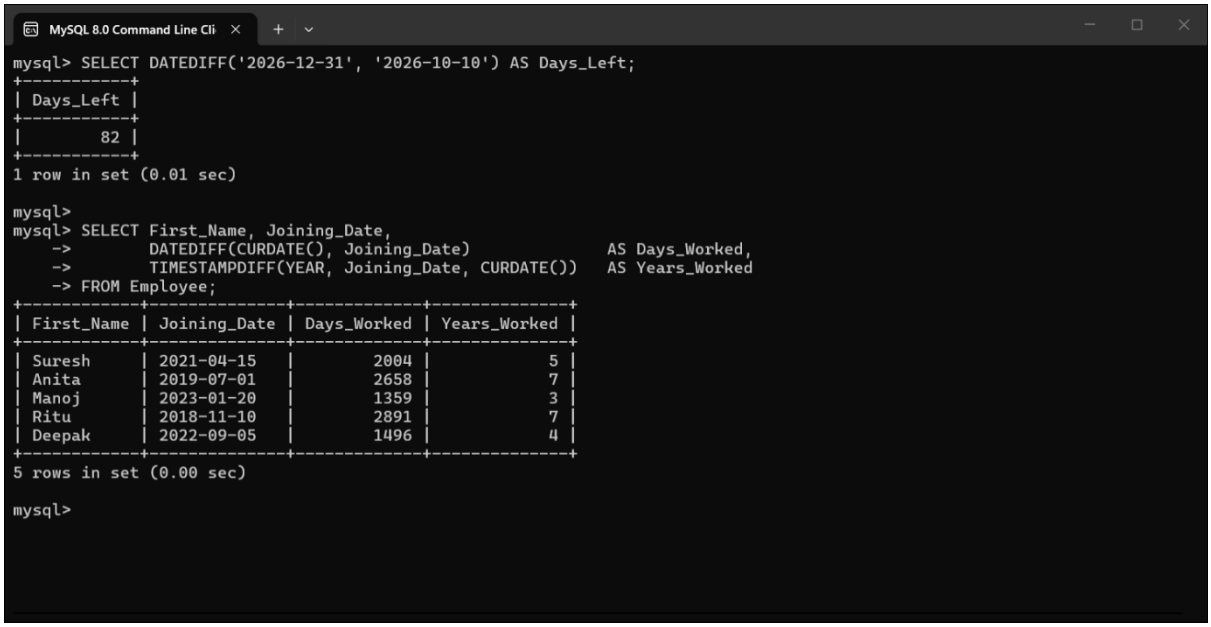

21. Display the current date using a suitable date function.

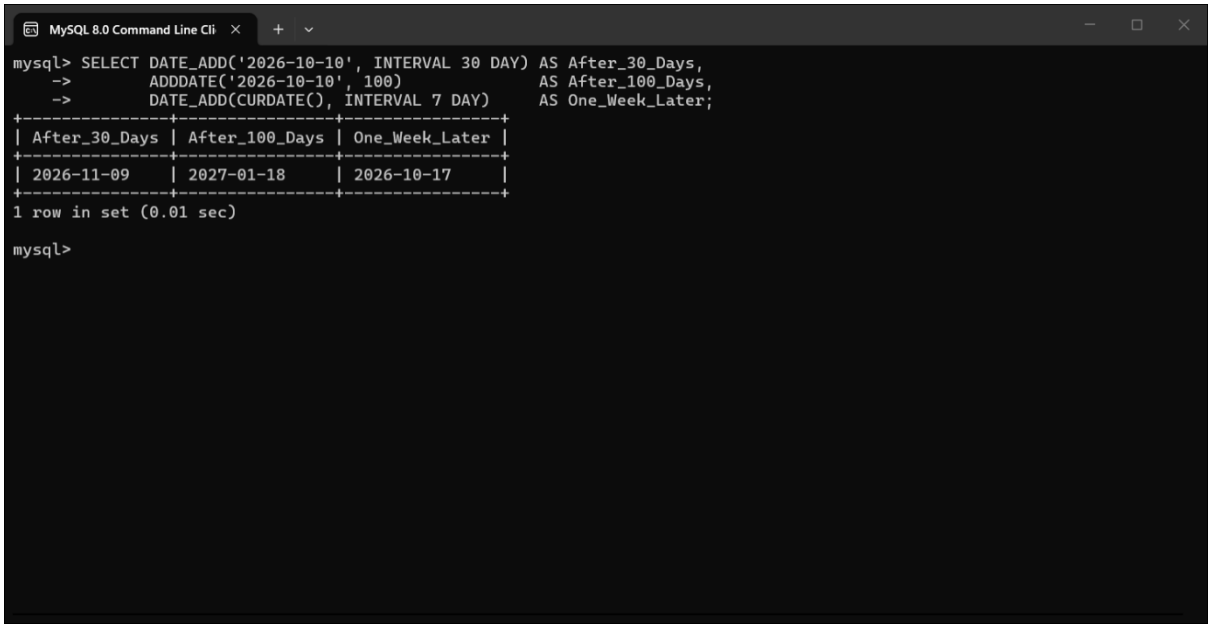

22. Extract the year, month and day from a date.

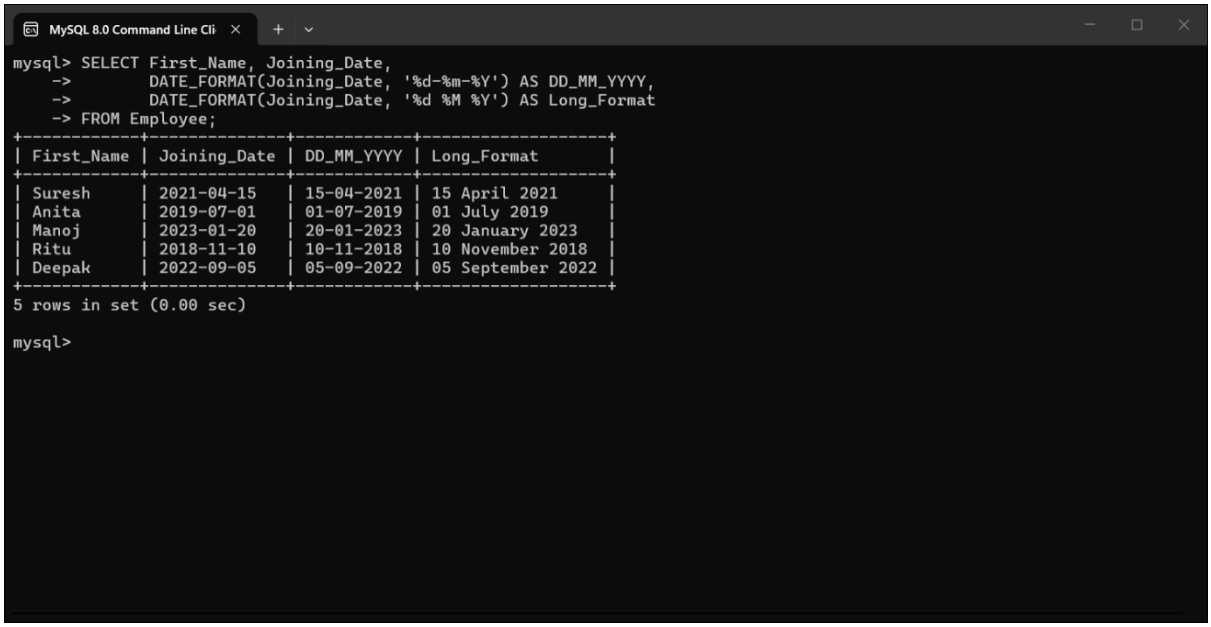

23. Find the difference between two dates.

24. Add a specified number of days to a date.

25. Display employees' joining dates in a required date format.

MySQL 8.0 Command Line Cli
mysql> SELECT First_Name, Joining_Date,
-> DATE_FORMAT(Joining_Date, '%d-%m-%Y') AS DD_MM_YYYY,
-> DATE_FORMAT(Joining_Date, '%d %M %Y') AS Long_Format
-> FROM Employee;
First_Name	Joining_Date	DD_MM_YYYY	Long_Format
Suresh	2021-04-15	15-04-2021	15 April 2021
Anita	2019-07-01	01-07-2019	01 July 2019
Manoj	2023-01-20	20-01-2023	20 January 2023
Ritu	2018-11-10	10-11-2018	10 November 2018
Deepak	2022-09-05	05-09-2022	05 September 2022
